
RESOURCES FOR FURTHER INQUIRY

This program provides an introduction and overview of closure of abandoned water wells. Several local, state, and federal organizations can assist with understanding the need for closure of abandoned wells. These potential contacts are provided for assisting the program participants.

Local soil and water conservation boards may have financial resources available to assist in the well plugging. Please contact your local board to see if resources are available. You will need to develop and implement a management plan for your farming operation to qualify for these resources.

Some local groundwater conservation districts have assistance available for plugging of abandoned water wells. Please contact them concerning assistance. They will probably also register a copy of the well plugging report in addition to sending the report to the Texas Department of Licensing and Regulation.
