
INTRODUCTION

Purpose

This facilitator guide to “Well Plugging – Plugging Water Wells in Texas” is designed to reinforce and enhance concepts introduced in the companion video, through facilitator-guided discussion. This facilitator guide was created to provide you, the facilitator, with background information about the risk to landowners with abandoned wells.

Program Design

The program is segmented into a core session and optional discussion sessions. The 50-minute core session includes a 10-minute ice breaker activity, watching a 20-minute video and a 20-minute core discussion focused on the main topics addressed in the video. Additional discussion sessions are optional. Additional 10-minute discussion sessions provide in-depth discussion of specific topics. You have the freedom to choose the additional topics you want to discuss, according to your training objectives and program time frame.

Credits and Certification

This program can be used to provide continuing education to pesticide applicators. You will need to cooperate with the Texas Department of Agriculture or your local Cooperative Extension agent for offering continuing education credits.
